

Specifications

Variable split allows opening between 0 and 30 degrees, a wider range than “natural-style” keyboards. By “splaying” the keyboard modules it positions your wrist and hand in a neutral posture greatly reducing ulnar deviation.

Adjustable lateral tilt allows users to minimize forearm muscle tension (pronation) without the pitfalls of excessive tilt.

Narrow footprint: Your mouse is right where you want it – not at arms-length! Even fully separated, the Maxim meets the “compact” criterion. In a typical split configuration, the Maxim keeps your mouse significantly closer than with any “natural-style” keyboard, reducing over-reach issues.

Removable palm supports: Comfortably padded to take the weight off your shoulders without hurting your hands and eliminating wrist extension. The pads and/or the palm supports (with pads) can be refurbished.

Quiet, tactile switches: Key switches provide a soft touch and positive feedback.

Flexibility in configuration: Adjustability allows the Maxim to conform to the user’s preferences. For dedicated number crunching an optional 10-key numeric pad is available and allows the user to position number section right or left.

Compatible operating systems: USB & PS/2 Systems: Windows 98, NT, 2000, XP, Vista, 7 & 8
